

Java Project2 Report

Chapter1 问题描述

实现一个多客户端的纯文本聊天服务器，能同时接受多个客户端的连接，并将任意一个客户端发送的文本向所有客户端（包括发送方）转发。

Chapter2 实验过程

实验环境：

Windows/WSL

IDEA

openjdk version "11.0.12"

- **Server** 类：服务器

- 成员变量

```
1      public final ServerSocket;  
2      public final Thread connector;  
3      public final Thread sender;  
4      public static final int PORT = 8080;
```

- 默认端口 **8080**

```
1      public static final int PORT = 8080;
```

- 根据端口新建一个 **ServerSocket**

```
1      public final ServerSocket serverSocket = new ServerSocket(PORT);
```

- **Server** 的构造函数

```
1      public Server() throws IOException {  
2          List<ConnectClient> connectClients = new ArrayList<>(); // 连接上  
           的客户端  
3          List<String> msgs = new ArrayList<>(); // msgs为待传输的消息队列  
4          connector = new Connector(this.serverSocket, connectClients,  
           msgs); // 监听是否有客户端连接  
5          sender = new Sender(connectClients, msgs); // 监听是否有消息要发送  
6          connector.start();  
7          sender.start();  
8          System.out.println("connect success: " + serverSocket);  
9      }
```

- 将信息发送给所有的客户端

- **List<String> Msgs** 为等待的消息队列
- 唤醒等待的所有线程

```

1 public static void SendToAll(List<String> Msgs) {
2     synchronized (Msgs) {
3         Msgs.notifyAll();
4     }
5 }

```

- **ConnectClient** 类：服务器连接的客户端

- 成员变量

```

1 public int no;
2 public String nickname = null;
3 private final Socket socket;
4 public final PrintWriter printWriter;
5 public final BufferedReader bufferedReader;
6 public final List<String> Msgs; // 待传输的消息队列

```

- 接收客户端发来的消息

- 如果结尾是 **BYE** 则退出
- 将待发送的消息加入消息队列

```

1 while (true) {
2     String r = null;
3     try {
4         r = bufferedReader.readLine();
5     } catch (IOException e) {
6         // throw new RuntimeException(e);
7         System.out.println(e);
8         break;
9     }
10    if (r.equals("BYE")) {
11        Msgs.add("[NOTICE]: " + this.nickname + " left the
chatting room");
12        Server.SendToAll(Msgs);
13        printWriter.println("BYE");
14        printWriter.println("END");
15        break;
16    }
17    System.out.println(this.nickname + " send: " + r); //
delete while submit
18    String sendMsg = this.nickname + ": " + r;
19    synchronized (Msgs) {
20        Msgs.add(sendMsg);
21        Msgs.notifyAll();
22    }
23 }

```

- **Connector** 类：连接客户端和服务端，启动

- **Sender** 类

- 发送消息到客户端

- 从消息队列中取出一个字符串，通过printWriter打印在客户端

```

1 while (true) {
2     String now = null;
3     synchronized (Msgs) {
4         if(Msgs.isEmpty()) {

```

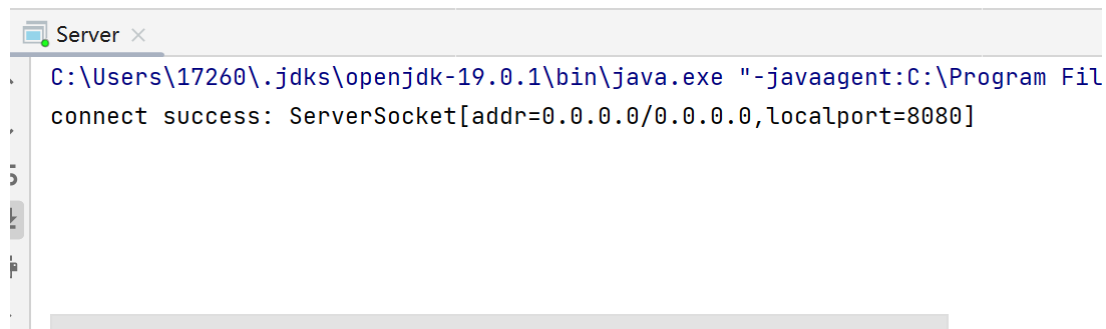

```

5         try {
6             Msgs.wait();
7         } catch (InterruptedException ignored) {
8         }
9     } else {
10        now = deq(Msgs);
11    }
12 }
13 if(now != null) {
14     for(ConnectClient connectClient : connectClients) {
15         connectClient.printWriter.println(now);
16     }
17 }
18 }

```

Chapter3 测试

运行server:

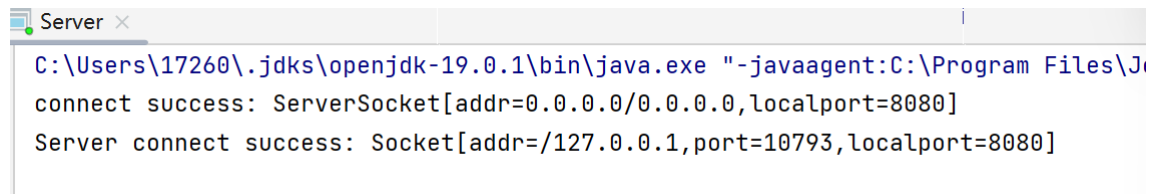

```

Server
C:\Users\17260\.jdk\openjdk-19.0.1\bin\java.exe -javaagent:C:\Program Files\Java\jre-9\lib\management-agent.jar connect success: ServerSocket[addr=0.0.0.0/0.0.0.0,localport=8080]

```

连接:

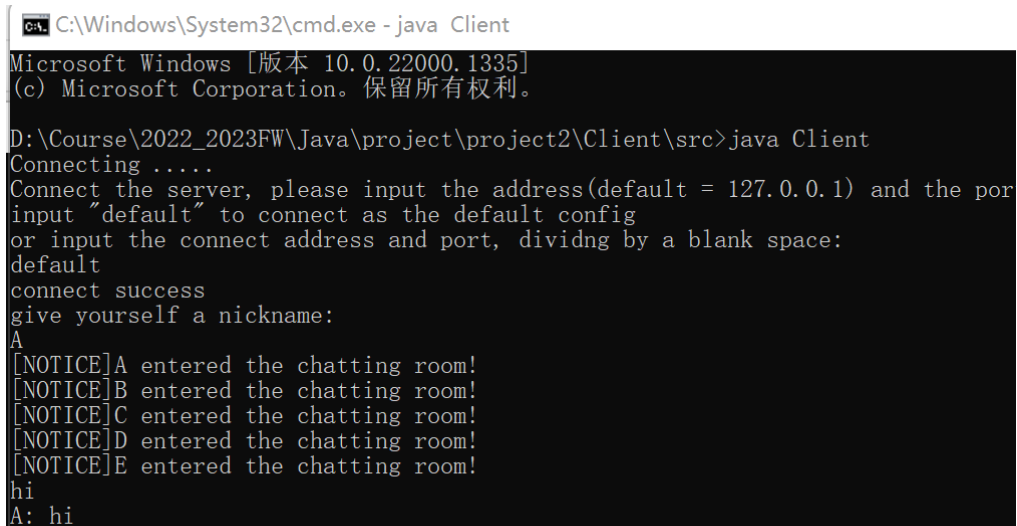

```

Server
C:\Users\17260\.jdk\openjdk-19.0.1\bin\java.exe -javaagent:C:\Program Files\Java\jre-9\lib\management-agent.jar connect success: ServerSocket[addr=0.0.0.0/0.0.0.0,localport=8080]
Server connect success: Socket[addr=/127.0.0.1,port=10793,localport=8080]

```

用客户端程序进行测试（连接了5个客户端）

- A发送消息，此时所有客户端都可以收到消息

```

C:\Windows\System32\cmd.exe - java Client
Microsoft Windows [版本 10.0.22000.1335]
(c) Microsoft Corporation。保留所有权利。

D:\Course\2022_2023FW\Java\project\project2\Client\src>java Client
Connecting .....
Connect the server, please input the address(default = 127.0.0.1) and the port
input "default" to connect as the default config
or input the connect address and port, dividng by a blank space:
default
connect success
give yourself a nickname:
A
[NOTICE]A entered the chatting room!
[NOTICE]B entered the chatting room!
[NOTICE]C entered the chatting room!
[NOTICE]D entered the chatting room!
[NOTICE]E entered the chatting room!
hi
A: hi

```

```

Connecting .....
Connect the server, please input the address(default = 127.0.0.1) and the port(default = 8080),
input "default" to connect as the default config
or input the connect address and port, dividng by a blank space:
default
connect success
give yourself a nickname:
E
[NOTICE]E entered the chatting room!
A: hi
```

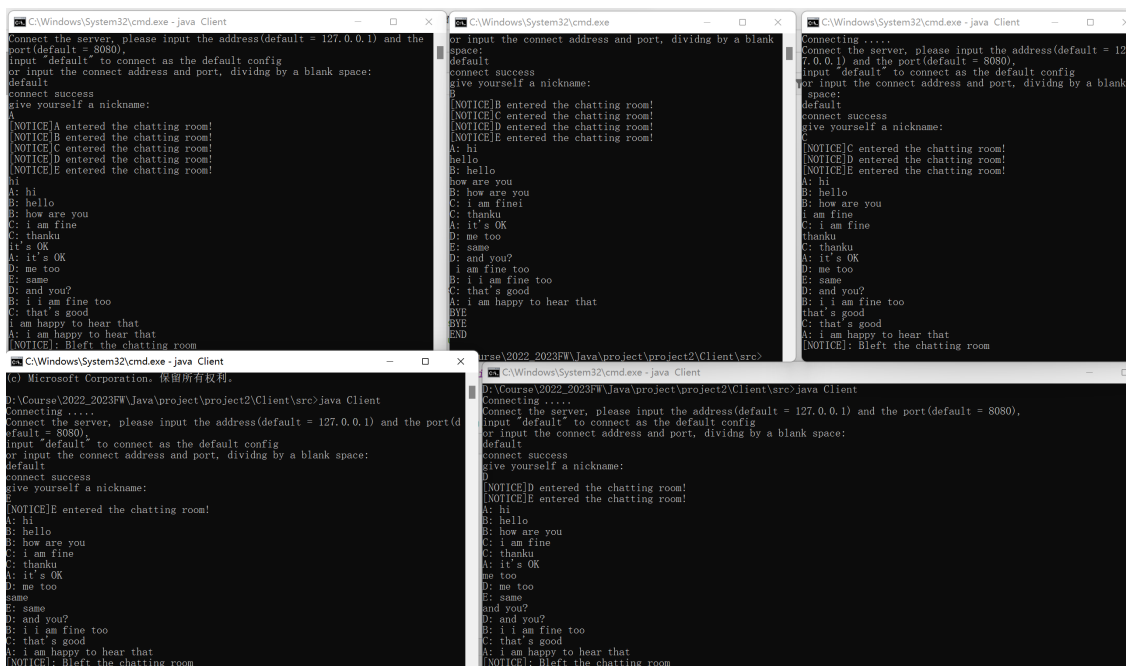

- 进行对话

- 输入 **BYE** 客户端断开

```
C:\Windows\System32\cmd.exe
or input the connect address and port, dividing by a blank
space:
default
connect success
give yourself a nickname:
B
[NOTICE]B entered the chatting room!
[NOTICE]C entered the chatting room!
[NOTICE]D entered the chatting room!
[NOTICE]E entered the chatting room!
A: hi
hello
B: hello
how are you
B: how are you
C: i am fine
C: thanku
A: it's OK
D: me too
E: same
D: and you?
i am fine too
B: i i am fine too
C: that's good
A: i am happy to hear that
BYE
BYE
END
D:\Course\2022_2023FW\Java\project\project2\Client\src>
```

- 此时其余的客户端收到消息: **B left the chatting room**

Chapter4 遇到的问题

在打包jar包时, 运行时, 报错:

```
D:\Course\2022_2023FW\Java\project\project2\server\out\artifacts\server_jar>java -jar .\server.jar
错误: 加载主类 Server 时出现 LinkageError
      java.lang.UnsupportedClassVersionError: Server has been compiled by a more recent version of the Java Runtime (class file version 63.0), this version of the Java Runtime only recognizes class file versions up to 55.0
```

在网上查阅资料知, 这是由于运行.jar的环境和打包.jar包的环境的java版本不一致导致。
